Tech Mahindra

PRODUCT CENTRIC DELIVERY

TechM's New Age IT Delivery Model

MFGNXt

IT need to evolve to support the growing demands of digital disruptions in the manufacturing industry.

25 MILLION Cars
Exponential Growth in Connected Cars

40 PERCENT
Yearly growth in IoT Data.

20 PERCENT
of the digital spend is on building digital factories

$6 /HOUR
Cost of Robotic Manufacturing vs Human labor @ $5/hr

Project Centric Application Portfolio

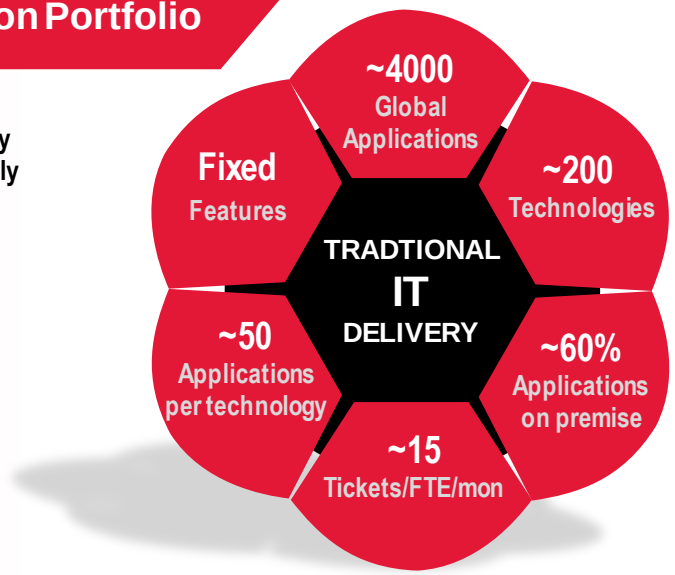
Project centric delivery is centralized, monolithic, has high dependency on legacy technologies, low productivity and is largely IT focused.

It is not suitable for the transformative MVP model demand by Business.

IT Legacy portfolio need to change and integrate with new Digital solutions.

We are seeing that organizations are adopting COTS products, Agile models, CLOUD services.

But these are incremental changes and done in 'siloed' manner.

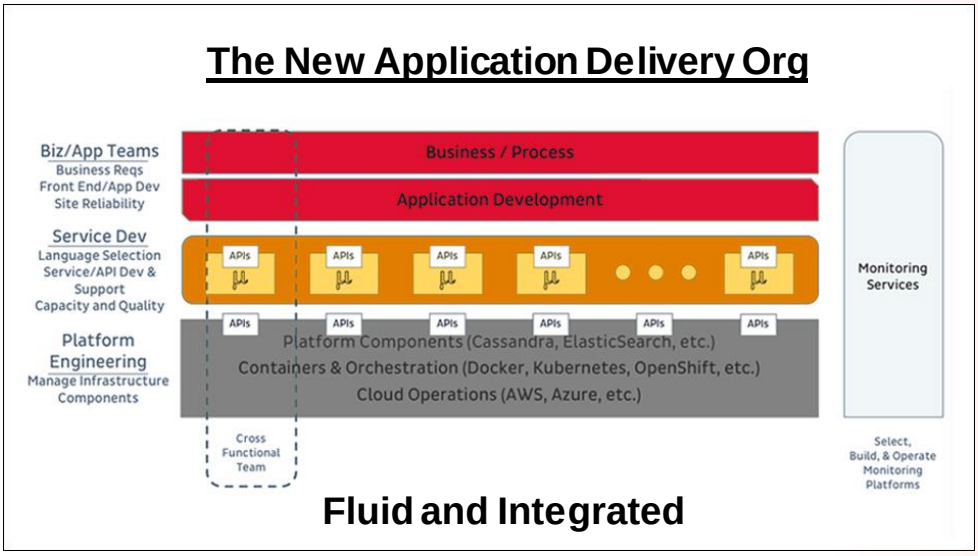


Sample sizing for any global manufacturing OE

Connected World.
Connected Experiences.

Tech Mahindra's – New Age IT delivery Model

New Age Product centric Delivery Organization enables a digital operating model with emphasis on 'Outcome' and it creates a smart IT Organization to deliver at the new speed of business.



- Massive reusability
- Encourages design thinking
- Smart Infrastructure
- Auto Provisioning
- Auto Scaling
- Proactive SQA
- Rapid Delivery

TechM's new age product oriented architecture aligns the business strategy to software development and execution by leveraging new technologies, frameworks, and processes in its architecture.

Enables continuous flow of work to the product teams and continuous value to business through MVPs

Our success story for a US based Auto OEM
