

# Cross Border Payment

One of the first live Blockchain implementations in a Bank in India – traces the inward remittance trail for the Nepal – India payments corridor

## Drill Down Reports

01

### Lack of Real Time Audit Trail

For inward remittance payments corridors of the Bank

02

### Blockchain as a Disruptive Tech

Bank wanted to explore impact on business processes and related IT systems

04

## Co-existence with Legacy

In line with security standards of the Bank was demonstrated through this solution

### Proposed Solution

A transparent and easy cross-border funds transfer with immutable audit trail  
 Audit data and Transaction data are captured and stored in Blockchain using smart contracts  
 Web application to view Blockchain captured Transaction and Audit data based on roles and rights
